## Easy Arm Candy Stack

[dreamalittlebigger.com](http://dreamalittlebigger.com) for [ilovetocreate.blogspot.com](http://ilovetocreate.blogspot.com)

I don't know what it is but an armful (or two) of pretty bracelets makes me feel more glamorous than anything in the world.

So I decided to make a super easy stack of arm candy with some beads, findings, and of course [Aleene's Jewelry and Metal Glue](#) and got after it.

For this cuff jewelry project you will need:

- Ready to embellish cuff
- Fun, blinged out beads or buttons
- Nippers and a rasp or jewelry file
- [Aleene's Jewelry and Metal Glue](#)

I found the perfect beads which just happened to have loops on the back to run string through. That would have been great if I wanted to string them but I wanted to add them flush to a metal cuff.

To correct the tiny problem, trip the loops as closely as possible.

Use your rasp or file to remove as much as possible until the bead or button lays nice and flush on your cuff. Repeat for as many elements as you need for your bracelet.

Apply a small dollop of jewelry and metal glue to the backside of your button or bead, or several dollops if the size or shape requires.

Now this glue means business and I have a tendency to be clumsy or accident prone. And since I've glued myself to one to many things, I use rubber tipped clamps in situations like this. It's just the same as if I held the bead down with my own fingers, but this way I don't have to worry about accidentally securing my hand to my jewelry!

Continue until all pieces are attached as you wish... And your fun cuff is ready to rock!

Next we're going to make a fun beaded bracelet to add to the stack.

For this bracelet you will need:  
A variety of metal and rhinestone beads  
Plastic or glass spacer beads as needed  
Stretch rubber jewelry cord  
[Aleene's Jewelry and Metal Glue](#)

You may need to experiment when stringing your beads for a proper fit. String as you'd like them and if too large, you may need to work out a pattern with a few less beads or if too small a few more. I find spacer beads come in handy for this and always grab something that will work with my primary beads in the event that things don't work out as first planned.

Be sure to stretch your cording before you begin so that it doesn't become too large with time!

My beads required two cords but that's no big deal. When finished knot the cord 3 times and then apply a healthy dollop of [Aleene's](#)

[Jewelry and Metal Glue](#) to the knot. Allow to fully dry and then trim the extra string close to the knot.

And this baby is ready to go just like that. I can't stress enough that the choice of glue can make a huge difference in the longevity of your jewelry and while the glue makes a small appearance in the project, the need for it is great!

Lastly we're going to knock out a quick and on trend wrapped rhinestone bangle.

For this project you will need:  
Store bought rhinestone bangle  
String, cord or embroidery floss  
[Aleene's Jewelry and Metal Glue](#)

Tie a knot in your string and begin wrapping around each stone. Pay attention to the number of turns you take on each to keep the look consistent.

When you get to the end, apply a small amount of [Aleene's Jewelry and Metal Glue](#) to the string and wrap at the end to finish. Hold the string taut for a minute or two until the glue sets.

Simple, sweet and totally stylish!

These are all so easy to create if you just have the right glue on hand.

And with the wide variety of beads and buttons available, the options are endless!

Pay special attention to the metal and stones in your beads to ensure a nice stack of arm candy when paired together.

But if you choose, each piece is stunning enough to be worn on its own!
